## MINI DEHUMIDIFIER INSTRUCTION MANUAL

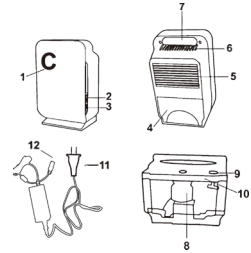

Designed by **VIVOSUN** in California.  
Made in China

This mini dehumidifier uses Peltier technology (without compressor), making the dehumidifier light and quiet. It is the perfect device for small rooms. Poor ventilation causes mold and musty odors in wardrobes, cabinets, storage rooms, and basements, etc. This mini dehumidifier contains an internal filter net that eliminates this problem by removing excess moisture.

- ★ To avoid the risk of electric shock: do not open this device. There are no user serviceable parts inside.
- ★ All work must be done by a qualified technician appointed by our distributors.
- ★ Specifications are subject to change for the improvement of the device without prior notice.

- |                         |                             |
|-------------------------|-----------------------------|
| 1. LED indicator        | 7. Handle                   |
| 2. On / Off button      | 8. Hydraulic Cut-off        |
| 3. AC power socket      | 9. Water displacement hole  |
| 4. Removable water tank | 10. Water tank              |
| 5. Air inlet            | 11. AC plug with power cord |
| 6. Air outlet           | 12. DC connector            |

1. After removing the packaging materials, 3 items should be included in the package:
  - a. A Mini-Dehumidifier    b. AC Plug    c. AC/DC Power Adaptor
2. Plug the cable into the side power port and then connect the AC plug into the appropriate main socket.

Capacity	Approximately 400ml per day at 25°C, 85% RH
Cooling element	thermo-electric Peltier module
Fan	90mm x 90mm DC FAN
Voltage	100-240V 50/60Hz (AC/ DC power adaptor)
DC	12V
Power	48W
Removable water tank	1.3L
Water level detector	Automatic switch off with "Red" LED Indicator turning on when water tank is full
Product dimension	7.2"(W) x 11.3"(H) x 5"(D)
Working environment	Over 15°C

When the water tank is full (approximately 1.3L), the unit will switch off automatically and a Red LED light will turn on.

To remove the water tank, first switch off the mini dehumidifier. Then, remove the water tank from the unit and pour the water out. Re-place the water tank back into the unit. To continue the dehumidification process, press the ON button again.

Before cleaning the unit, turn off the mini dehumidifier and unplug the AC plug from the socket. Use a piece of soft cloth to clean the surface of the product, or use a brush to wipe the dust off of the ventilation and air inlets.

1. After you have finished using the dehumidifier, we recommend switching the unit off.
2. Keep the air inlet grill and the top outlet free from blockages such as cloth, plastic, bags, or paper.
3. Always keep the unit in an upright position to avoid water leakage.
